COMPANY INTRODUCTION

Welcome to the world of ZhenXi Industry, China's high-quality and shiny beverage and aluminum can packaging manufacturer. Bold taste is our nature. The flavored energy drinks and beers we process are quality controlled from the source, giving the drinks a unique taste and healthy quality. At the same time, we are far ahead in the environmental packaging industry.

Our brand was established in 2023, but our factory has a 20-year history of development. From providing products to other manufacturers and brand merchants in the past to now establishing our own professional trading company, we have taken every step steadily.

Our main products include: energy drinks, beer (various flavors), blended drinks (cocktails, whiskey), fruit juice (pure fruit juice or containing pulp ingredients), as well as other types of beverages, personalized aluminum cans. We provide a one-stop service from customizing flavors to filling and packaging.

In our past development process, our team has gone through a process from new construction to iteration, forming a first-class production technology work team and supporting design and trade teams. We ensure that our cooperation with every customer is built on trust and responsibility, providing the best beverage customization experience and excellent packaging design services to each customer.

We strictly control the quality during the production process to ensure that every beverage produced meets the highest standards, allowing everyone to drink with peace of mind. From raw material testing to product filling and delivery, we spare no effort in pursuing the best in every detail.

TREND OF GLOBAL MARKET

Zhenxi Industry Co., Ltd. was formerly a factory specializing in diversified services such as food and beverage production and customization. From customer sample customization to final placement on the shelves, we always adhere to the strictest service standards and attitude to give back to customers. After years of accumulation, our target customers have moved from domestic to the international stage. We are also the most trusted partners of well-known brands in other countries. Our footprints have begun to spread all over the world. Starting in 2023, we have moved from factories to the international trade stage. We hope that in the future In the food and beverage production market, we can bring high-quality products and services to more customers.

PRODUCTS

ENERGY DRINK

What does an energy drink contain?

In the mood for specifics? Here are some of the helpful healthy ingredients of energy drinks:

- Vitamin B is known to improve mood and can also help fight cancer and heart disease.
- B12, which can help keep your red blood cells and nerves healthy. Also helps regulate the nervous system, and plays its part in maintaining a healthy digestive system.
- Riboflavin treats muscle cramps and blood disorders.
- B6: boosts cardiovascular and nervous systems, as well as the immune function.
- Niacin can relieve arthritis pain and lower blood lipids.
- Pantothenic Acid aiding allergies, and skin disorders, stress, and anxiety.

ENERGY DRINK

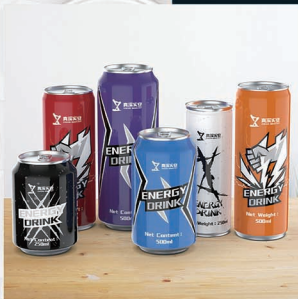

Benefits Before Exercise

They're great during your exercise routine, but energy drinks can also help get you in the right mindset. Improves your mood. Feeling weary and unmotivated to exercise? Many energy drinks are packed with Vitamin B, which are known to regulate mood, and might be just the thing to get you out, working out.

Comes in zero-calorie options. For those taking energy drinks with a view to helping with exercise, the last thing you want is to have to work off the calories that are in the drink itself. So, you'll be pleased to hear that you can enjoy calorie-free certain energy drinks, such as aptonia, without having to work off it after.

Can improve brain function. Multiple studies show that energy drinks can improve measures of brain functions such as concentration, memory, and reaction time, and can also reduce mental fatigue. Some believe that this is purely down to the inclusion of caffeine, whereas others believe it is the combination of caffeine and sugar.

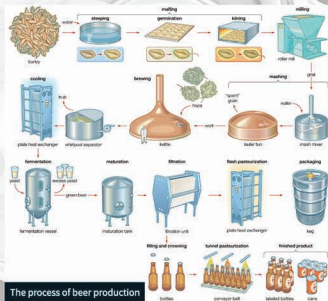

BEER

Beer, alcoholic beverage produced by extracting raw materials with water, boiling (usually with hops), and fermenting. In some countries beer is defined by law—as in Germany, where the standard ingredients, besides water, are malt (kiln-dried germinated barley), hops, and yeast.

THE BREWING PROCESS

Beer production involves malting, milling, mashing, extract separation, hop addition and boiling, removal of hops and precipitates, cooling and aeration, fermentation, separation of yeast from young beer, aging, maturing, and packaging. The object of the entire process is to convert grain starches to sugar, extract the sugar with water, and then ferment it with yeast to produce the alcoholic, lightly carbonated beverage.

The process of beer production

OUR CELEBRITY BEERS

Product name: Black beauty Craft beer
Net content: 1000ml
Ingredients: Barley malt, malt, hops, water
Features: Constantly develop a variety of flavor enhancement craft beers.

Product name: Lager
Net content: 330ml
Ingredients: Malt, water, hops, yeast
Features: The fermentation time is short, the yield is large and the efficiency is high.

Product name: Ale
Net content: 473ml
Ingredients: Malt, water, hops, yeast
Features: Translucent appearance; The foam is rich and delicate, and the hanging cup is long-lasting; Rich in aroma

Product name: Hybrid
Net content: 500ml
Ingredients: Malt, water, hops, yeast
Features: The taste is delicate, mellow and killing

RTD ALCOHOLIC DRINKS

RTDs can be grouped into three main categories:

Malt-based: This group includes beverages that call for malt-based alcohol, like hard seltzers, hard tea and hard kombucha.

Spirits-based: The spirits-based category includes RTD cocktails, some seltzers and shooters that are spiked with spirits.

Wine-based: The wine-based RTD category includes canned wine and wine cocktails in tetra packaging.

COCKTAIL

A cocktail is a mixed drink typically made with a distilled liquor (such as arrack, brandy, cachaça, gin, rum, tequila, vodka, or whiskey) as its base ingredient that is then mixed with other ingredients or garnishments. Sweetened liqueurs, wine, or beer may also serve as the base or be added. If beer is one of the ingredients, the drink is called a beer cocktail.

Cocktails often also contain one or more types of juice, fruit, honey, milk or cream, spices, or other flavorings. Cocktails may vary in their ingredients from bartender to bartender, and from region to region. Two creations may have the same name but taste very different because of differences in how the drinks are prepared.

WHISKY

Whisky is a type of liquor made from fermented grain mash. Various grains (which may be malted) are used for different varieties, including barley, corn, rye, and wheat. Whisky is typically aged in wooden casks, which are typically made of charred white oak. Uncharred white oak casks previously used for the aging of port, rum or sherry are also sometimes used.

Whisky is a strictly regulated spirit worldwide with many classes and types. The typical unifying characteristics of the different classes and types are the fermentation of grains, distillation, and aging in wooden barrels.

OTHER MIX STYLE

Brandy

Brandy is a distilled liquor made from fruit or fruit juice (pulp) through fermentation, distillation, aging, and blending. Note: Products made from grapes or grape juice can be referred to as brandy, and other fruits can be used as raw materials, and the product name is named after the fruit.

Tequila

Tequila is a distilled liquor made from agave as raw material, fermented, distilled, aged and blended.

RUM

Rum is a distilled liquor made from sugarcane juice, sugarcane molasses, sugarcane syrup or other sugarcane processed products through fermentation, distillation, aging and blending. Note: No edible alcohol is added during the production process.

JUICE

Juice is a drink made from the extraction or pressing of the natural liquid contained in fruit and vegetables. It can also refer to liquids that are flavored with concentrate or other biological food sources, such as meat or seafood, such as clam juice. Juice is commonly consumed as a beverage or used as an ingredient or flavoring in foods or other beverages, such as smoothies. Juice emerged as a popular beverage choice after the development of pasteurization methods enabled its preservation without using fermentation (which is used in wine production).

Fruit juice lasts the shortest time in room temperature and uncovered. In sealed container and cold storage it can last longer.

Product name:ZHEN XI ORANGE JUICE

Net content:270ml

Ingredients:Water, carbon dioxide,white sugar, grape pulp, citric acid, spices, sodium benzoate, acesulfame potassium, sunset yellow.

Features: Abundant and stable.

Product name:ZHEN XI BLUEBERRY JUICE

Net content:330ml

Ingredients:Water, blueberry puree, sugar carbon dioxide, acesulfame potassium, sunset yellow.

Features:It is rich in vitamins and has high nutritional value.

Product name:ZHEN XI WATERMELON JUICE

Net content:250ml

Ingredients:Water, watermelon puree, sugar,carbon dioxide, sunset yellow, acesulfame potassium.

Features: The taste is rich and healthy and nutritious

COFFEE

It has very obvious advantages over traditional ground coffee; it's much quicker and easier to prepare, and is usually much cheaper than fresh coffee. Coffee is a proven antioxidant and studies show that there are many health benefits to its consumption.

CARBONATED DRINKS

Carbonated drinks refer to drinks filled with carbon dioxide under certain conditions. The main ingredients of carbonated drinks include carbonated water, acidic substances such as citric acid, sugar, and spices. Some contain caffeine, which has the functions of refreshing the brain, relieving summer heat, quenching thirst, and replenishing water.

1. Refreshing the brain and refreshing the mind: Carbonated drinks contain high sugar content, which can quickly replenish the energy needed by the body and play a role in refreshing the brain and refreshing the mind.

2. Relieve summer heat and quench thirst: Carbonated drinks are injected with a large amount of carbon dioxide gas. After the gas enters the body, the solubility will decrease as the temperature rises. People will easily burp and take this opportunity to take away the body's carbon dioxide. Heat, drinking it in hot weather can play a role in quenching summer heat and quenching thirst.

3. Replenish water: The main ingredient of carbonated drinks is water. After drinking, it can replenish the water consumed in the body and maintain the balance of water and electrolytes in the body.

What needs to be made clear is that although carbonated drinks are a diversified and convenient beverage choice with certain potential benefits, they are not suitable for drinking too much or every day, especially for children, the elderly, and patients with diabetes. Long-term drinking may lead to excess calories, which may lead to obesity. At the same time, the acidity of carbonated drinks may cause erosion of teeth and affect oral health.

ALUMINUM CAN

An Aluminum can (British English: Aluminium can) is a single-use container for packaging made primarily of aluminum. It is commonly used for food and beverages such as olive and soup but also for products such as oil, chemicals, and other liquids.
